

STATEMENT REGARDING GELATINE AND DUST EXPLOSIONS

GME, the Gelatine Manufacturers of Europe, represents the European gelatine manufacturers.

The dust explosion risk of gelatine and hydrolysed gelatine have been examined and tested. Several samples from different locations in the plant and from different producers were tested.

From the overall results GME can conclude that gelatine, also in fine powder like hydrolysed gelatine, is a product with very low explosion risk (Class ST 1).

On behalf of GME members

Marc Vermeulen
GME secretary General

Validity period: until 31 December 2017
